

High Energy Laser Weapon System

General Atomics Electromagnetic Systems' (GA-EMS) advanced solid state **High Energy Laser (HEL) Weapon System** provides proven laser technologies to enable the detection and defeat of an expanding range of land, sea, and air targets.

Lightweight, efficient thermal management

Shorter dwell times and rapid retargeting

Extended target engagement ranges

Integrated ultra-high power density battery system

Scalable distributed gain laser technology

Pulsed and continuous wave systems

Proven technology for high energy solid state laser systems

Designed for all warfighting environments

Ruggedized with vibration and shock isolation

Greater performance at reduced lifecycle cost

High Energy Laser Weapon System

GA-EMS' HEL weapon system offers significant power-on-target enabling shortened engagements and rapid retargeting. The increased power provides lethality at longer ranges and increased effectiveness against hard targets. The system's modular, scalable design also offers significant reductions in size, weight, and power consumption to suit air, land, and sea-based platforms.

LAND-BASED

SEA-BASED
